CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates to a group of novel viral RNA regulatory genes, here identified as "viral genomic address messenger genes" or "VGAM genes", and as "genomic record" or "GR" genes. VGAM genes selectively inhibit translation of known host target genes, and are believed to represent a novel pervasive viral attack mechanism. GR genes encode an operon-like cluster of VGAM genes. VGAM and viral GR genes may therefore be useful in diagnosing, preventing and treating viral disease. Several nucleic acid molecules are provided respectively

encoding several VGAM genes, as are vectors and probes, both comprising the nucleic acid molecules, and methods and systems for detecting VGAM genes, and for counteracting their activity.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The invention provides methods and compositions for engineering microbes to generate Hydrogen. Some methods of the invention involve recoding of hydrogenase genes followed by subjecting the recoded genes to annealing-based recombination methods. The invention further provides methods of mating organisms that are transformed with recoded and recombined hydrogenase genes with other organisms containing different genome sequences.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The invention provides methods and compositions for engineering cells to generate large amounts of hydrogen. Genes that are involved in hydrogen production pathways and genes that are upregulated when cells are exposed to conditions conducive to the generation of hydrogen are mutagenized according to disclosed protocols. Microbes containing

nucleic acid constructs are screened or selected for the ability to generate an increased amount of hydrogen. Methods of producing hydrogen are also disclosed.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Abstract of the Disclosure

The invention provides methods and compositions for engineering microbes to generate Hydrogen. Some methods of the invention involve recoding of hydrogenase genes followed by subjecting the recoded genes to annealing-based recombination methods. The invention further provides methods of mating organisms that are transformed with recoded and recombined hydrogenase genes with other organisms containing different genome sequences.
